

## JOB DESCRIPTION

Job Title: **Senior IT Engineer/IT Technical Consultant**  
Reporting to: **Head of Q Secure Systems (QSS)**

---

## RESPONSIBILITIES

This role will largely be home-based remote working and on client sites in London. Some work will also be performed at the company premises in Newbury. Clients could be anywhere in the UK for installation work, so a willingness to travel when required is important. The role will encompass the design, development, implementation and test of Enterprise IT systems, including:

- Requirement(s) clarification
- Infrastructure design (input)
- Development of comprehensive build documentation
- Field Implementation, build and configuration (the key aspect of the role)
- Deployment Testing
- System enhancement and maintenance
- Transfer to Operations (TTO) and migration support

The focus will be on implementing systems from an existing design. The platform(s) will primarily be a virtualised Windows domain. Significant experience of windows full stack deployments is essential along with strong virtualisation skills across both VMware and Hyper-V. Linux/Unix server configuration (Redhat, Ubuntu & CentOS) experience is also required.

The Senior IT Engineer will be able to deal with all aspects of system deployment and configuration. Critical to the success of the service will be an ability to work independently and diligently but also quickly as part of a combined client and supplier project team.

The candidate will be familiar with the deployment of multi-vendor products w.r.t Compute, Storage and backup solutions and should have an excellent working knowledge of Cisco networking components.

Send your CV to [work@qassociates.co.uk](mailto:work@qassociates.co.uk) and tell us how you can make a difference to the team.
